

Merchandising systems made easy

From ASI, the company which invented Slatwall, comes Tecno, an innovative system of knots and tubes which fit together to allow you to create a limitless array of merchandising display units.

A wonderfully simple solution for the creation of unique shop furniture, Tecno gives you the building blocks for showcases, tables, shelving units, wall, floor and ceiling structures to display any type of merchandise.

Tecno is an ingenious system of connecting knots to smooth or slotted tubes that can be arranged

together to build a range of display structures, with a collection of versatile accessories that can be incorporated to give you full merchandising capabilities.

Add the flexibility to incorporate insert panels such as glass or timber that can be fixed horizontally, vertically or angled for complete versatility. Panels can be built framed

with the tubes or build frameless displays. Hinged knots allow you to add doors to complete your structure. Tecno can also be shipped flat packed and is easy to assemble using an Allen key, making it cost-effective and effortless to install.

ASI has offices throughout Australia — contact details below for nearest location.
